Microsoft Office Application Training
Introductory Microsoft Word for the Workplace

Class Description:
The successful student will learn to perform basic Word skills including creating, saving, revising, formatting and printing documents. In addition, the student will learn to perform intermediate tasks such as building and formatting a table of contents, a bibliography, footnoting, headers, footers, and more.

Program Description:
This class is part of a series designed for students with minimal computer experience. Each class will feature training in one key application of the Microsoft Office Suite including a class for each of the following: Word, Excel, and PowerPoint. These classes are designed to be taken independently of each other. The student may begin with any class in the series and may take the classes in any order.
